

828 Digital Control

Custom Control

Applications

The Woodward 828 Digital Control manages and controls reciprocating engines (gas, diesel, or dual fuel) used in power generation, marine propulsion, and gas compression/distribution. The control may also be used in cogeneration, power transmission/ distribution, process management, pipeline pump stations, utility power generation, emergency standby power, and remote control station operation. The 828 provides state-of-the-art control for new and retrofit situations.

Programming

Your Woodward Distributor provides custom programming for the 828 Digital Control. (Standard preprogrammed versions for power generation, marine, gas engine, mechanical drive, etc. are available on our 723 Plus Digital Control.)

The custom 828 Digital Control can be programmed to meet specific needs for specialized functions in process, plant, engine, and marine applications. The custom versions may be used as unit or engine level controls, or as supervisory controls for such things as sequencing, load shedding, heat recovery management, and system monitoring and alarming.

Communications

The 828 Digital Control provides two separate serial interfaces for RS-232, RS-422, or RS-485 communications. The ports feature standard ASCII character handling or an industry-standard Modbus[®] * protocol (ASCII or RTU). Baud rates are programmable to meet specific user requirements. Devices that may be connected include terminals, printers, data loggers, modems, and any other devices that use RS-232, RS-422, or RS-485. The 828 control can also communicate using the Local Operating Network (LON[®] **) protocol for digital communications. The 828 control's I/O ports may be expanded through LinkNet[®] nodes. Typical LinkNet nodes include thermo-couple, RTD, analog, and discrete type I/O.

Adjustments

Adjustments may be made quickly and easily through the 828 control's standard PC Interface or optional hand held programmer. Both adjustment methods are menu-driven and record all set points.

Self-Diagnostics

The 828 Digital Control has integrated diagnostics to determine the control integrity. Memories, processor, and baseline power supply monitoring are included in the diagnostic tests.
